Evening Brief

Date: Monday, August 27, 2018

Weather Summary

Temperatures will be well below normal across the northern half of the Great Basin in the wake of a cold front. Conditions will gradually warm and dry Wednesday and Thursday, with increasing winds possible later this week ahead of another low pressure system.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Fuels and Fire Behavior advisory has been issued for [Northern Great Basin](#)

Fuels/Fire Potential

A Fuel/Fire Behavior advisory has been **UPDATED** for North/West Nevada into Idaho and Northern Utah. This advisory can be found here: <https://gacc.nifc.gov/gbcc/fuels.php>

Critically dry fuels across the northern half of the Geographic Area will modify greatly over the next 2-3 days, due to wetting rains across much of ID/WY, and to a lesser extent, due to the much higher humidity across Northern NV/UT.

Sagebrush Live Fuel Moisture levels across the northern half of the Great Basin are near or below mid-August normals, and grasses are cured in all areas. ERC's are below the 50th percentile across most of the southern half of Nevada, the southern 2/3 of Utah, into the AZ Strip.

Drier air will move across much of the Great Basin by the middle this coming week. This will rapidly dry finer fuels across Northern NV and NW UT back towards critical levels. Across ID/WY this will be a much more gradual process, due to the recent wetting rains.
